Bug reports

Release assessment

Recommendation: no-go.

- **App:** https://qa-marketplace-app-b9mpo.ondigitalocean.app
- **Cycle:** Nov 4-5, 2026
- **Browsers:** Chromium desktop (1280x720) and iPhone 13 viewport. Locale en-US, time zone America/New_York. Firefox/WebKit not run this cycle.
- **How:** manual exploration + Playwright. Signed-in findings used a test account with a fake address. No order placed.

Severity	Count
Critical	2
High	10
Medium	9
Low	4
Total	**25**

Main blockers: consent / privacy gaps (BUG-003 to BUG-007, BUG-017), wrong money on options / tax / fee / Express (BUG-012, BUG-018, BUG-019, BUG-022), search 500 on common characters (BUG-009).

BUG-001

Title: Wrong discount percentage on sale badges

Description:

On every product on sale, the badge percentage is (original - price) / price instead of (original - price) / original. The “You save” amount on the product page is correct; only the percentage is overstated. Example: Canvas Weekender Bag $95 / $140 shows -47% instead of -32%. Worst case seen: a book at $10 / $20 shows -100%.

Steps to reproduce:

1. Open /products?onSale=1
2. On any card, compare the badge with the two prices
3. Check the home page Deals section and the product page as well

Actual result:

Badge = (original - price) / price; every badge overstates the discount.

Expected result:

Badge = (original - price) / original, rounded (Help -> Shopping).

Severity: High

Flow: Automated - tests/e2e/discount-badge.spec.ts

Evidence: docs/evidence/BUG-001-discount-badges.png

BUG-002

Title: “You might also like” recommends the product being viewed

Description:

In the related-products section on the product page, the first card is the product the shopper is already looking at.

Steps to reproduce:

1. Open /products/p115 (or any product)
2. Scroll to “You might also like”
3. Look at the first card

Actual result:

The product being viewed appears as the first recommendation.

Expected result:

The list shows other products only.

Severity: Low

Flow: Automated - tests/e2e/related-products.spec.ts

Evidence: docs/evidence/BUG-002-related-self.png

BUG-003

Title: GDPR: “Reject non-essential” is not remembered and the banner returns

Description:

After rejecting non-essential cookies, no cookie or storage entry is written. The banner returns on the next page, after a reload, and after client-side navigation. “Accept all” is stored for 12 months in the mp_consent cookie. The Cookie Policy says the choice is remembered for 12 months.

Steps to reproduce:

1. Open / in a fresh browser
2. Click “Reject non-essential”
3. Open /products (or reload)

Actual result:

The banner returns. Only visitors who accept have their choice persisted.

Expected result:

The banner does not come back after “Reject non-essential”.

Severity: High

Flow: Automated - tests/e2e/cookie-consent.spec.ts

Evidence: docs/evidence/BUG-003-reject-banner-returns.png

BUG-004

Title: GDPR: marketing emails are pre-ticked at sign-up

Description:

"Email me offers and product news" starts ticked, so every new account is opted in to marketing unless the user notices and unticks it. The Privacy Policy says marketing is opt-in only if the user ticks the box. Pre-ticked consent is not valid under GDPR.

Steps to reproduce:

1. Open /register
2. Look at the second checkbox (marketing)

Actual result:

The box is ticked when the page opens.

Expected result:

The marketing box starts unticked.

Severity: Critical

Flow: Automated - tests/e2e/registration-privacy.spec.ts

Evidence: docs/evidence/BUG-004-marketing-preticked.png

BUG-005

Title: GDPR: cookie consent cannot be changed or withdrawn

Description:

Once "Accept all" is clicked, the banner never returns and there is no "Cookie settings" control. The Cookie Policy tells users to clear site cookies in the browser, which also signs them out.

Steps to reproduce:

1. Click "Accept all"
2. Look in the footer or Cookie Policy for a way to turn analytics off

Actual result:

No control exists; only clearing browser cookies works.

Expected result:

A control reopens the choice at any time.

Severity: High

Flow: Manual - the control does not exist yet (nothing to target with a data-testid)

Evidence: docs/evidence/BUG-005-no-withdraw-control.png

BUG-006

Title: GDPR / legal: Terms of Service page does not exist (404)

Description:

The “Terms of Service” link (sign-up and footer) points to /terms, which returns 404. Sign-up requires agreeing to the Terms and Privacy Policy. Checkout says the same. Accounts are created against terms that are not published.

Steps to reproduce:

1. Open /register and click “Terms of Service” (or use the footer link)

Actual result:

404 “This page could not be found”.

Expected result:

The Terms of Service page opens with its content.

Severity: High

Flow: Automated - tests/e2e/registration-privacy.spec.ts, tests/e2e/legal-pages.spec.ts

Evidence: docs/evidence/BUG-006-terms-404.png

BUG-007

Title: GDPR: Privacy Policy is missing required information

Description:

Help -> Privacy Policy lists what is stored and four rights (access/portability, correction, erasure, marketing opt-out), but it omits the controller and contact, legal bases, recipients, transfers, retention periods, restriction/objection/ withdrawal, and the right to complain to a supervisory authority.

Steps to reproduce:

1. Open Help -> Privacy Policy (/help#privacy)
2. Compare the content with GDPR art. 13 requirements

Actual result:

The page only covers part of what is required. Several points are still missing.

Expected result:

A complete notice covering controller, purposes, legal bases, recipients, retention, all rights, and the right to complain to an authority.

Severity: High

Flow: Manual - needs legal review, not a text match

Evidence: docs/evidence/BUG-007-privacy-policy.png

BUG-008

Title: Price sorting uses the original price of products on sale

Description:

With “Price: low to high” / “high to low”, sale items are ordered by their struck-through original price, not by the price the shopper pays.

Steps to reproduce:

1. Open /products?sort=price-asc
2. Read the current prices across the pages

Actual result:

Sale products are placed by their original (compare-at) price.

Expected result:

Products ordered by the selling price.

Severity: Medium

Flow: Automated - tests/e2e/catalog-sorting.spec.ts

Evidence: docs/evidence/BUG-008-price-sort.png

BUG-009

Title: Search returns HTTP 500 for common characters (+ ( ) [* ?)

Description:

Queries containing those characters hit an error page with status 500. Example: searching “C++” cannot find “C++ Programming…”.

Steps to reproduce:

1. In the header search, search for c++
2. Observe the response

Actual result:

HTTP 500 error page.

Expected result:

Results, or “No products found”.

Severity: High

Flow: Automated - tests/e2e/search.spec.ts

Evidence: docs/evidence/BUG-009-search-500.png

BUG-010

Title: Search lists a product whose page cannot be opened (404)

Description:

Searches such as “garden”, “smart” or “sensor” return “Smart Soil Moisture Sensor” (p149). It is not in the catalog, and /products/p149 says “We couldn’t find that product”.

Steps to reproduce:

1. Search for “sensor”
2. Open the first result

Actual result:

The result opens a 404 product page.

Expected result:

Search shows only published catalog products with a working page.

Severity: Medium

Flow: Automated - tests/e2e/search.spec.ts

Evidence: docs/evidence/BUG-010-search-404-product.png

BUG-011

Title: The maximum price filter excludes products priced exactly at the maximum

Description:

The minimum is inclusive. The maximum is not. Max $50 leaves out the Pour-Over Coffee Set at $50.00. Max $27 leaves out the Pruning Shears at $27.00.

Steps to reproduce:

1. Open /products?category=garden&max=27
2. Check whether the $27.00 product appears

Actual result:

Products priced exactly at the maximum are left out.

Expected result:

Both minimum and maximum limits are inclusive.

Severity: Low

Flow: Automated - tests/e2e/catalog-price-filter.spec.ts

Evidence: docs/evidence/BUG-011-max-price-filter.png

BUG-012

Title: An option that costs extra: page shows the base price, cart charges more

Description:

Help -> Shopping says the price updates when an option that costs extra is chosen. The product page keeps the base price; the cart and checkout charge the higher one. Example: Aurora Wireless Earbuds with “Wireless charging case +$20” -> $79.99 on the page, $99.99 in the cart.

Steps to reproduce:

1. Open /products/p101
2. Choose “Wireless charging case” (price stays $79.99)
3. Add to cart and open /cart

Actual result:

The page shows the base price. Cart and checkout charge the higher amount.

Expected result:

The product page price updates with the surcharge; the cart matches what was shown.

Severity: Critical

Flow: Automated - tests/e2e/product-variants.spec.ts, tests/account/cart.spec.ts

Evidence: docs/evidence/BUG-012-cart-higher-price.png, docs/evidence/BUG-012-variant-base-price.png

BUG-013

Title: Delivery estimates count calendar days and can fall on weekends

Description:

Help -> Shipping: Standard 5 and Express 2 business days, starting the day after the order, with no weekend delivery. The product page shows calendar-day dates (Express can land on a Saturday). Checkout uses business days, so the two places promise different dates for the same order.

Steps to reproduce:

1. Open any product page
2. Compare the Standard/Express “arrives by” dates with a business-day calendar

Actual result:

Calendar-day dates. Express can fall on a weekend. The dates diverge from checkout.

Expected result:

Arrival dates in business days, never on Saturday or Sunday.

Severity: Medium

Flow: Automated - tests/e2e/delivery-estimate.spec.ts

Evidence: docs/evidence/BUG-013-delivery-dates.png

BUG-014

Title: A long product title pushes the price out of the card

Description:

On the card for “4K Action Camera with Waterproof Case, Dual Touch Screens, Electronic Image Stabilization and 64 GB Memory Card Bundle for Travel Vlogging” (multi-line title), the price is drawn about 23 px below the card border and overlaps the next section at 1280 px wide.

Steps to reproduce:

1. Open / at desktop width
2. Look at the first Deals card

Actual result:

The price sits outside the card and overlaps content below.

Expected result:

The card grows or the title is truncated so the price stays inside the card.

Severity: Low

Flow: Automated - tests/e2e/product-card-layout.spec.ts

Evidence: docs/evidence/BUG-014-price-outside-card.png

BUG-015

Title: Pages are served without security headers

Description:

HTML responses omit Strict-Transport-Security, Content-Security-Policy, X-Content-Type-Options and Referrer-Policy, and send X-Powered-By: Next.js. The mp_consent cookie is also set without the Secure flag.

Steps to reproduce:

1. curl -sI https://qa-marketplace-app-b9mpo.ondigitalocean.app/register
2. Inspect the headers (also on / and /login)

Actual result:

Headers missing. X-Powered-By exposed. mp_consent without Secure.

Expected result:

Standard security headers present. No X-Powered-By. Cookie marked Secure.

Severity: Medium

Flow: Automated - tests/e2e/security-headers.spec.ts

Evidence: docs/evidence/BUG-015-security-headers.png

BUG-016

Title: Some page loads hang for 30 to 60 seconds

Description:

Intermittent (~1 in 50 navigations): the page does not finish within 30 s (seen on /, /privacy, price filters). The same URL then loads in under a second. May be hosting rather than the app; needs server logs.

Steps to reproduce:

1. Navigate the main pages repeatedly
2. Watch for occasional 30-60 s hangs

Actual result:

Intermittent long hangs.

Expected result:

Pages load in a few seconds consistently.

Severity: Medium

Flow: Partial automation - tests/e2e/load-time.spec.ts (5 s timeout; fails when the hang occurs)

Evidence: none (intermittent hang, no visual trigger)

BUG-017

Title: GDPR: “Download my data” leaves out addresses and orders

Description:

The Privacy Policy promises a JSON file with profile, saved addresses, orders and reviews. /api/account/export returns exportedAt, profile, marketingConsent, reviews and shop - with no addresses or orders.

Steps to reproduce:

1. While signed in, save an address under Account -> Addresses
2. Use “Download my data” under Privacy & data
3. Open the JSON file

Actual result:

No addresses or orders in the export.

Expected result:

File includes profile, addresses, orders and reviews.

Severity: High

Flow: Automated - tests/account/data-export.spec.ts

Evidence: docs/evidence/BUG-017-download-my-data.png, docs/evidence/BUG-017-export-json.png

BUG-018

Title: The marketplace fee is more than 10%

Description:

Help -> Selling: a 10% fee on item sales only. On order #9998 with a $50.00 item subtotal, the fee shows -$5.50 and the seller earns $44.50 (11%, or 10% of $55).

Steps to reproduce:

1. Signed in as a seller, open Seller hub -> Orders
2. Read the earnings block of any order

Actual result:

Fee $5.50 on $50.00; earn $44.50.

Expected result:

Fee = 10% of the item subtotal (e.g. $5.00 on $50.00; earn $45.00).

Severity: High

Flow: Automated - tests/account/seller-earnings.spec.ts

Evidence: docs/evidence/BUG-018-seller-fee.png

BUG-019

Title: Sales tax ignores the discount

Description:

Help -> Payments & tax: 8% on the item subtotal after any discount. With WELCOME10 on $99.99, expected tax is $7.20 / total $97.19. The app keeps tax at $8.00 (8% of the pre-discount subtotal) and total $97.99.

Steps to reproduce:

1. Add a product to the cart
2. Apply WELCOME10
3. Compare tax with 8% of the discounted subtotal

Actual result:

Tax is calculated on the subtotal before the discount.

Expected result:

Tax = 8% of the subtotal after the discount.

Severity: High

Flow: Automated - tests/account/cart.spec.ts

Evidence: docs/evidence/BUG-019-tax-ignores-discount.png

BUG-020

Title: Typo “Shiping address” at checkout

Description:

The heading of checkout step 1 reads “Shiping address” instead of “Shipping address”.

Steps to reproduce:

1. Signed in, go to checkout with items in the cart
2. Read the step 1 heading

Actual result:

“Shiping address”

Expected result:

“Shipping address”

Severity: Low

Flow: Manual

Evidence: docs/evidence/BUG-020-shiping-typo.png

BUG-021

Title: Adding a product that is already in the cart does not raise its quantity

Description:

A second “Add to cart” for the same product: POST /api/cart/items answers 201, but the cart keeps quantity 1 and the header count does not change. No message is shown to the shopper.

Steps to reproduce:

1. Add /products/p104 to the cart
2. Reload the product page
3. Click “Add to cart” again
4. Open the cart

Actual result:

Quantity stays 1. No feedback.

Expected result:

Quantity increases (or a clear message if it cannot).

Severity: Medium

Flow: Automated - tests/account/cart.spec.ts

Evidence: docs/evidence/BUG-021-quantity-not-raised.png

BUG-022

Title: Express shipping is charged $14.99, labelled $9.99

Description:

Help -> Shipping and the Express option label say $9.99. The checkout summary charges $14.99 for Express, regardless of cart value.

Steps to reproduce:

1. Put any product in the cart
2. Open checkout
3. Choose Express
4. Read the summary

Actual result:

Shipping (Express) $14.99

Expected result:

Shipping (Express) $9.99

Severity: High

Flow: Automated - tests/account/checkout.spec.ts

Evidence: docs/evidence/BUG-022-express-1499.png

BUG-023

Title: A promo code stays after the subtotal drops below its minimum

Description:

Help -> Coupons: if the subtotal drops below the code's minimum, the code should be removed. With TAKE5 (min $30): 3x$14 = $42 with -$5; lowering to 2x$14 = $28 keeps the $5 discount (after reload and on checkout).

Steps to reproduce:

1. Build a cart of at least $30 with one product
2. Apply TAKE5
3. Lower the quantity until the subtotal is under $30
4. Check the discount in the cart and at checkout

Actual result:

The discount stays applied below the minimum.

Expected result:

The code is removed when the subtotal falls below its minimum.

Severity: Medium

Flow: Automated - tests/account/cart.spec.ts

Evidence: docs/evidence/BUG-023-promo-below-minimum.png

BUG-024

Title: The sign-up form accepts an email address without “@”

Description:

The form turns off the browser’s own check (novalidate) and its own check lets “not-an-email” through: every other empty field shows an error; the email shows none. Whether the server refuses it was not checked (that needs the password fields filled in).

Steps to reproduce:

1. Open /register
2. Type not-an-email in Email
3. Click “Create account”

Actual result:

No error on the email field; other empty fields fail as usual.

Expected result:

Error “Enter a valid email address.” under the email field.

Severity: Medium

Flow: Automated - tests/e2e/registration-privacy.spec.ts

Evidence: docs/evidence/BUG-024-invalid-email.png

BUG-025

Title: Primary buttons and original prices have too little contrast (WCAG AA)

Description:

axe-core: green primary buttons (white on #009966) ~3.65:1; struck-through original price (#90a1b9, 12 px) ~2.63:1. WCAG 2.1 AA requires at least 4.5:1. Affects /, /products, Deals, /register, /login, /cart. /help passes.

Steps to reproduce:

1. Open /, /products, /register, /login or /cart
2. Run an axe audit (or check contrast on green buttons and struck-through prices)

Actual result:

Buttons ~3.65:1; original prices ~2.63:1.

Expected result:

Text contrast of at least 4.5:1.

Severity: Medium

Flow: Automated - tests/e2e/accessibility.spec.ts

Evidence: docs/evidence/BUG-025-contrast.png
